000 of whom there are still a few[114]. In the business, he represents the 471 industrial member and as such he has a right to part of the profits[115], 222 [434] because of the fact that the fishing equipment is also ordinarily his property; and he has the right to appoint a master, the technical director of the business, whose obligations are limited to the maintenance and renovation of the equipment and to fishing. He may transfer the business voluntarily, taking back the equipment, either to sell it or simply to leave it grounded, even though the season may not be over. The construction of a covered shelter for the boats on the beach is his responsibility.

B) The Crew:

501 The master (ra'is) of the boat, appointed by the owner[116]...., 463 is the technical director of the business and he is therefore responsible for any property damages or injuries which can be justified, if they can be imputed to his unskillfulness or ill-will. He is given a free hand to select, appoint and discharge the individuals who have to make up his crew, of which he is the head, without the necessity of the consent of the owner; he is in charge of the selection of points of putting down the nets, fishing, embarkation and disembarkation, admission of merchandise and passengers, selection of shelters, collection of money, auctions and the responsibility for settlement of accounts; and while on board he is authorized to impose discipline by any means in extreme and necessary cases, and he must show the owner any necessary repairs or acquisitions which fall under his inspection. He is principally in charge of the working of the boat, and it is he who sets the course of direction. He appoints a second-in-command.

501 The crew must obey the master in the working of the boat, as
466 their job includes all operations, including loading and unloading. They can transfer at will (to another boat) whenever they like, in which case they are reimbursed with the gross value of their part of the profits, and in justifiable absences, such as short illnesses, the death of some relative, etc., there is no discount from their wages, if they are co-participants in the business; but this requires justification in front of the master and the consent of the rest of the crew, as well as previous warning.....

226 In fishing boats, they are accountable for the maintenance;
501 in boats of transport, they have charge of the profits.

226 C) Profits:
434

1) Fishing in a boat with net: the gross value of the sale is divided into two equal parts, one for the master and one for the crew. In addition to this, the master also receives one-seventh of the owner's share.

2) Fishing in a boat with hook: the gross value of the catch is divided into three equal parts; one for the owner of the appartus (net, lines, hooks....), another (not listed, probably a typographical error) and the last for the crew. Those who haul the nets on shore receive a few kilos of fish.

3) Fishing with explosives: three equal parts, two for the owner of the explosives and the third for the swimmer.

505 4) Transport of Travelers and Merchandise: the profits of the
434 trip, after maintenance expenses and port duties have been discounted, i.e. the true profit, are analogously divided into two parts, in the same proportion as in the case of fishing boats.

000 here. We have never seen or heard of them.

[463] [396] 114--There was a master boatbuilder who lived on the beach of Aith Bu Dawud in the Thimsaman, none in the Aith Waryaghar. He had no helpers in 1954, and got 500 pesetas and his food from future boat owners for building a boat.

115--The usual arrangement in this case is that the profits are split in half, one-half for the owner of the boat and the other half for the ra'is and the crew.

501 463 226 116--Each boat has a ra'is and a crew of four or five men. Sometimes, though rarely, the owner of the boat will be a different individual altogether; more often, however, the ra'is himself is the owner. It is also common for three or four fishermen to go shares on the price of an agharrabu or moruna (another common fishing boat of the same type, but smaller and of Spanish make), and they elect the most capable among them to be ra'is. If, for instance, there is a ra'is and a crew of four, the money from the sale of the catch is split six ways, the ra'is getting two parts. Before any division is made, however, 15-25 pesetas are given to the mule and donkey men who transport the fish to the tribal markets, while small boys who help pull the nets ashore receive one or two kilos of the catch.

[434]

226 The mouth of the Nkur River, emptying into the Mediterranean on the eastern side of the Plain of Al-Husaima, is an ideal place to fish, particularly in the area around Swani (Thimsaman). A boat takes the net (dhrarsha) out, leaving one of two ropes on the beach in the hands of a number of men or boys. When it has reached the end of the rope length, the net is let out in a semi-circle, with curled up ends, resembling a snail. The boat is then rowed back to shore, and the other rope then handed out to a second group of men and boys, as far away from the first rope as possible. When fish begin to collect in any quantity, each group starts pulling in on the ropes, lessening the distance between them as they do so. If the catch promises to be big, the agharrabu goes out again, to be rowed in behind the net in case of trouble. The site of the net is determined by the crew, who know where the fish are by watching places where birds dive into the water. After the net is hauled up on the beach, the crowd rushes out to scoop up the still leaping fish into baskets. They are put on a common pile in the sand, and the division of the catch begins. During the season, boats go out twice a day, in mornings and afternoons. Late summer is the heaviest season, and the ra'is and crew sleep and eat on the beach. They always have to be on the lookout for breaks in the nets and for fish which enter. At other times of year, after laying the nets out to dry, all go home and return in the morning; but with morunas, one person is always there, day or night, as a guard.

000 117--Capt. Gardiner was an English adventurer who ran guns to 'Abd al-Krim during the Rifian War; and Si l-Hadi n Dadi, of the lineage of Thighanimin, subclan of Izimurren, clan of Izimmuren, tribe of Ibuqquyen, still lives in Alhucemas (1961). During the Rifian War, in 1924, 'Abd al-Krim sent him to Paris with Si Muhand Uzarqan, the Rifian Foreign Minister, to try to preserve good relations with the French (which were broken when 'Abd al-Krim invaded the French Zone of Morocco the following year). After the war, Si l-Hadi eventually became, under the Spaniards, khalifa to the pasha of Al-Husaima, then known as Villa Sanjurjo.

443 I shall now attempt to schematize the suq in the Central Rif. While this diagram may not include all classes of participants nor all exchanges, I think it covers the majority of all cases. The buyers and sellers in the weekly market can be divided into three separate categories. The first are the tribal fellah, rooted socially in the local community. Unquestionably, this group constitutes the vast majority of people at the suq. Whatever economic interaction they have with the suq is prompted by acquiring cash to finance social expenditures or to provide a limited range of goods such as cooking oil, kerosene, sugar, tea, salt and so forth, for household consumption. The majority of persons in this category, the poor fellah, have brought their small lots of goods derived from their agricultural activities to exchange at whatever the prevailing price in order to obtain cash for making equally small purchases. They do not seek to accumulate surpluses of cash so that they can market larger quantities of goods in successive market meetings.

443 442 434 435 The second category of people involved in any one market is made up of the large-scale merchants who have come to buy from the fellah. This group is completely impersonal, rarely if ever having any local connections with the populace. These merchants are well provided with capital, own their own trucks, and are knowledgeable about supply and demand conditions in both the local and national markets in which they operate. In the case of most large-scale buyers, they are accompanied by a group of hired men who seek out market information. These informants

443 gather up verbal information about the prevailing prices and the
442 supply of a commodity in the sug. Their operation is somewhat
434 more complex than the sellers who can quickly assess the supply
435 of the market since they need only evaluate the quantities of their competitors. The large-scale buyers do not have such early information and must rely on their "runners" to supply them with market conditions on the inpouring of a commodity into the market. The centers of these operations are quite exciting as information pours into them and the merchant sends out his buying price.

443 While the lot size of his purchases is uniformly small (buying
442 from the numerous fellah who have only small lots to sell), the large-scale merchant departs from the market with a sizable supply

442 of his good. At the end of market day he is assessed a tax based
[651] on the quantity he has purchased and transports the merchandise to urban centers where even larger firms purchase the good either to transform it into another sort of goods, through an industrial or factory process, or to break it down into small lots again to sell at a higher price. The principle behind his operation is simple. By his act of transporting commodities away from the area in which they were produced to another area in which they are scarce, he multiplies the value of the goods.

443 Amongst themselves such buyers have a rather accurate idea
435 of the prevailing prices among their competitors at the market-
442 place. Whatever price differential that exists at the market develops from the efficiency of information gathering. By this word-of-mouth information the buyer is able to estimate market

442 profit not from dispersing goods in the same marketplace but in
571 transporting the goods from one region to another.
[443]

Large-scale buyers interact with small-lot sellers in a limited range of goods which, generally, can be transformed by industrial processes into another commodity (grapes to wine, almonds to cosmetics, oranges to canned fruit), the conversion of which enhances the value of the original object. These buyers are plugged into a larger economy with export connections and are
442 sensitive to external conditions. Tribesmen who produce in order
433 to meet the demand of such buyers are likewise closely connected
434 with the national and international economy. There is a small but growing number of fellah who produce to sell to this group, but even among them there is a reticence to move completely into the commercial sector. My impression is that the great majority of the Riffian peasantry engaging in cash-cropping attempt to maintain a balance in their production schedule which continues to include a fair proportion of traditional crops. By generalizing their production, few of the grape specialists suffered from
[458] the decrease in prices during 1965. This contrasts with the one-
[435] crop estates in Algeria which during the same period suffered severe setbacks.

443 The small-scale sellers of both goods and services occupy that position which is left open by the unwillingness of the local Berber to engage in full-time commerce and the absence
[434] of the large-scale entrepreneur. They are, on the one hand, dealing in commodities or services the margin of profit on which

443 is too low for the large-scale merchants to intrude in competi-
434 tion. The type of commodity (clothes, kerosene, and so on) can-
[438] not be increased in value through combination and transportation,
[435] while at the same time the volume of trade is so sporadic and low that only the one-man operation can derive a living from it. We might assume that wherever there exists an adequate margin of profit through combination and increase in scale, the large-scale firm will preempt this position. The leftovers, so to speak, go
443 to the small middleman operation. On the other hand, these small-
182 scale merchants are performing services which have a low cultural value among the local population. Thus the small-scale seller of goods and services fills a vacuum. He cannot be displaced by the large firms, since it would not be profitable for them to compete with him. At the same time, he serves the local community by providing necessary but socially disapproved of services.

443 Finally, the tribesmen interact amongst themselves--
438 producers selling to household consumers. Since the fellah's trade is always in small lots (with the exception of livestock), most transactions in this sector are on a very small scale. Lack of capital and limited interest in the market characterize this group. Sellers seek to dispose of their product at whatever the prevailing price as quickly as possible. Buyers choose mainly in terms of quality of the commodity rather than price, which tends to be even--each seller listening to his neighbor seller and selling accordingly. There is very little differential in this group in product or price. The cause behind this lies,

105 443 182 114 blindness that led Benet to conclude: "Everything that is not domestically produced has, therefore, to be obtained from the market, through market transactions, and no exchange or commercial activities of any kind are attempted outside of these times and places. The market place has a monopoly on exchange transactions [amongst Berbers]" (1957:196).

105 443 441 182 434 438 The market itself is not the area of primary concern for the fellah. Professional merchants, of course, fall into another category. But there is little impetus for the growth of an indigenous merchant class. The merchant entrepreneur is, by definition, acting in a way which runs counter to the status economy. He is primarily concerned with devoting his capital to profit or income-producing investments. While the peasant comes to the market with commodities to exchange for money to buy other commodities, the merchant seeks to convert money into commodities which he can resell in order to acquire more money. Social and religious imperatives only interfere with the merchant's freedom of action.[1] Unlike transactions in the social sphere which perpetuate themselves into the future as part of a web of reciprocal obligations, the merchant seeks transactions which are impersonal and terminal at the moment of exchange. He is most at home in the suq, where these conditions are nearest to being achieved.

---

[1] I do not mean to draw too close a parallel between the Protestant merchant and his Muslim counterpart. The Islamic business ethic still awaits its Weber.

/295 cont./

619 648 in the creation of a kind of political chessboard analogous to the one that we found among the Masmouda, subsided for a time.

175 726 [648] Several years of peace -- from 1898 to 1903 -- were followed by the passing of the pretender Bou Hamara and soon by the intervention of Spain on the coasts of the Rif beginning from 1909. Anarchy broke out anew; other leffs were again constituted [616] [634] around the two rival fractions of Targist, winning all the country from the West to the East, from the Beni Gmil to the Beni Amret. It was in the course of these combats that there then appeared and grew important such amghars as El Hajj Beqqich, in the north of the Gzennaya, Mohammed ᶜAbdallah of the Ijaᶜounen, in the tribe of the Beni Amret, Mesaᶜoud of Aqqa among the Beni Gmil.

634 [171] /296/ These minor chiefs then are masters more absolute in their tribes than the Masmouda amghars of the same importance; they do not find themselves in fact inconvenienced by the tradition of the oligarchic inflas councils, nor by the memory of the moqaddem's role. Nevertheless, like the amghars of the Haut-[171] [681] [434] Atlas /High Atlas/, they share with the notables the fines paid by the guilty, taking a third when they are still weak and nearly all when they have solidly established their power. In the cantons [614] [581] that they dominate, they establish other amghars chosen from among the strongest "tarfiqt" chiefs and bind them to them by marriages. The authority that they acquire in this way is such that they are capable of conducting far and wide, across the neighboring tribes, expeditions to a distance of a day's march, in order to go to make their word respected and to punish their adversaries. El Hajj Beqqich did this; leaving from the sources of the Nkor, he went with his horsemen to wreak vengeance on his enemies as far as Ajdir.

175 721 634 648 [669] At the time of the great movement for a holy war against Spain in 1921, the amghars figured at the head of the Riffian contingents. We see them take part with ardor in the battle of Anoual. But when ᶜAbd el Kerim, his relatives and companions from the village of Ajdir take, by means of the "Jihad," the command of the Beni Ouriaghel, organize a little state, bend the surrounding tribes to their will in order better to direct the fight
